

# DATA IS A HUMAN RIGHT

---

## **DIGITAL INCLUSION: DATA IS A HUMAN RIGHT**

- › Wi-Fiber strongly believes that access to data is a human right, and is a utility not unlike running water, and electricity.
- › Our technology specifically deploys in the most efficient and economic manner. Creating a connected and safe community results in community and individual self-actualization.

## **OUR SOLUTION:**

- › Wi-Fiber provides a network infrastructure capable of supporting multiple IoT and Smart City integrations along with wi-fi access in specific public spaces.
- › Our private network is able to not only enroll and aggregate a multitude of IP technology (cameras, sensors, A.I.) but also partition part of the network to provide public access wi-fi to the parks in outdoor community areas.

## **RURAL/SOCIO-ECONOMIC BROADBAND DELIVERY CAPABILITIES:**

- › Wi-Fiber is able to deliver to semi-urban, urban and rural environments that traditional carriers cannot service. Our private networks are multi-Gbps capable and have the ability to connect at up to 30+ miles.
